

Centralized BOS

CBOS is the heart of **Arcadia Suite**. It groups most of the administrative works of the point of sale and it manages the areas of cash register, store and fuel.

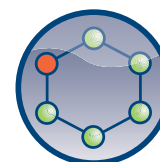

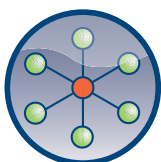

CBOS incorporates a **centralized database** and a greatly powerful graphic environment, with the handling of accurate statistics that can be easily exported to a spreadsheet or presentations programme.

To Highlight

With **CBOS** you have **immediate availability** of the information of the sale, and of the cash movements, apart from performing comprehensive **profitability studies** and marketing studies, which are now fundamental for **improving profits**.

It automatically makes a **calculation of needs**, managing orders and receptions. In store and fuel, it **optimizes to the maximum the fixed assets**, thus minimising the financial duty arising from the oversizing of the stock.

With **CBOS**, the perfect development of your business is guaranteed.

Centralized BOS
